BATHROOMS

Bathrooms were once a functional space, but now they are a place of sanctuary from the outside world and increasingly a space that is decorated with a specific mood in mind. Popular trends are adopted as we see these spaces being styled with the same conviction as other rooms.

One of the key features for 2016/17 is incorporating raw materials, metal work, concrete and the industrial mix of textures and colours into the home. This has been drawn upon in kitchens and dining spaces, but really does work beautifully in the bathroom too.

One of the key trends is the introduction of freestanding baths, emphasising the lines and contours of their shape by focusing on the materials used. Copper metallic, wood or gentle Carraras are all combined to create an eclectic mix of finishes and individual look. The choice is limitless!

The best part of this trend is being able to choose your favourite materials and finishes, and work them all together.

MAGIC marble

Marbles have been updated, they are intricately patterned, serene and smooth to touch. The mineral element of natural lines offers a contemporary finish but also a timeless elegance, this trend is here to stay. Matt and gloss combinations of gentle Carraras add a decorative and unexpected twist, whilst retaining the seamless space and timeless elegance.

The gentle transparency and soft grey hues are more popular this season and less aggressive than marbles of previous years. Marble can make matt fittings 'pop' against a subtle backdrop and emphasise features and fittings. Contrasting finishes such as concrete, add an urban touch whilst gentle colour combinations can add a hint of warmth and personal character.

This trend adds a real sense of polished glamour and luxury and can be used in a small and simple manner, layered upon a marble surface. Let your mind mellow and feel truly relaxed with the welcoming feel of cool and calming intricate beauty.

MARBLE makeover

Following the popularity of greys, this trend is a darker and more tonal take on the traditional light hued marble; adding a real sense of depth.

Fuse these deep marble hues with flair to radiate style and indulgence; almost offering a relaxing spa-like feel. Simple, elegant, yet functional, these unusual, veined, busy marbles are more grown up and elegant and a perfect partner to the gentler timeless Carrara.

The stylistic addition of dark metal work and an industrial style setting gives marbles a new angle. Modern taps and shower fittings combined with edgy interior design gives a mood more evocative of New York brownstone. This trend reflects surfaces that are meant to stand the test of time, strong durable structures and easy-on-the-eye tones.

ArTile

Ted's signature designs printed onto sleek, light reflecting glass for making a statement in any room of the home. Available in two sizes, the large ones are specially sized to be used as a splashback behind a kitchen cooker or sink or in a bathroom – just stick them on and enjoy. Both sizes and all designs would make an equally stylish work of art in any room, yes, even in the garden.

ArTile

Ted's signature designs printed onto sleek, light reflecting glass for making a statement in any room of the home. Available in two sizes, the large ones are specially sized to be used as a splashback behind a kitchen cooker or sink or in a bathroom – just stick them on and enjoy. Both sizes and all designs would make an equally stylish work of art in any room, yes, even in the garden.

RESIDENCE

● LINEA POINT

Inspired by traces of water; Point's droplets of deep gloss glaze punctuate a rich satin surface with a loose, yet linear pattern. The result is a surprising, yet subtle finish that responds to the way light falls upon it.

technical information

Technically Perfect

At British Ceramic Tile we strive to be faultless in our approach to meeting the strictest of technical standards. We produce in excess of 20,000m² of tiles every day and we do so within internationally recognised standards. This is a difficult technical challenge yet we do not compromise on any of these standards.

It is only by manufacturing in such volume, with such consistent technical precision, that we can be sure that we are able to pass on the benefits of our modern manufacturing capability downstream to our specifiers and end users in the form of better value for money in our product.

BS EN14411

As with most construction products, the main technical characteristics of ceramic tiles are classified by international standards. For ceramic tiles, the relevant harmonised European standard is BS EN 14411. This standard encompasses the BS EN ISO 10545 suite of ceramic tile test methods.

Within EN 14411, ceramic tiles are classified into various groups to reflect the range of production processes and product characteristics. The products manufactured in our factory in Devon are classified as group BIII and are covered by Annex L of the standard. We manufacture to strict levels of quality control throughout the entire production process to ensure all products meet or exceed these requirements. We periodically have the tiles independently assessed by an accredited ceramic test laboratory (CERAM).

CE Marking and Product Directives

The CE mark is a mandatory conformity mark for many products within the European Economic Area (EEA). By affixing the CE mark, the manufacturer asserts that the item meets all the essential requirements of all applicable harmonised European standards as set out in the relevant European Product Directives. For ceramic tiles, the requirements for CE marking are contained within Annex ZA of EN 14411. This standard meets the requirements of the Mandates M/119 (Floorings) and M/121 (Internal and external wall and ceiling finishes) given under the EU Construction Products Directive (89/106/EEC). Further information may be found at www.britishceramictile.com/technical

Slip Resistance

There is a duty of care upon stakeholders involved in specifying flooring products (manufacturers, architects, distributors, installers etc.) to ensure that the surfaces are fit for purpose and do not pose a safety risk. One of the key considerations is defining its slip resistance. The latest version of EN14411 does not define a single test protocol for assessing slip resistance. Instead several tests have been deemed to be acceptable and it has been left to individual EU member states to determine their favoured test. For the UK, the only slip test recognised by the Health and Safety Laboratory is the pendulum test. Other slip tests e.g. DIN 51130 Ramp or Tortus are not recognised.

For ceramic tiles, the use of the pendulum is covered by BS 7976-2. The test is designed to simulate the action of a slipping foot and uses a weighted swinging arm which contacts the test surface via a standard rubber heel (slider). The slip resistance is calculated by measuring the upswing - the greater the upswing, the lower the slip resistance.

Further details on measuring slip resistance can be found in the following link www.hse.gov.uk/pubns/web/slips01.pdf

The HSE has also developed a freely downloadable software package (Slip Assessment Tool – SAT) that allows users to assess the slip potential of pedestrian walkway surfaces using surface microroughness data and other relevant information. The SAT software can be downloaded free from the following link.

www.hsesat.info

Abrasion Resistance of Glazed Floor Tiles (PEI)

All floor coverings are exposed to wear due to the abrasive action of dirt particles contained on the soles of the user’s footwear. Over prolonged periods this causes the appearance of the tile to change. As applied to glazed ceramic floor tiles, surface abrasion is assessed by BS EN ISO 10545-7.

This test is a compulsory requirement for glazed ceramic tiles intended to be used in flooring applications. This test involves subjecting the glazed tile to an abrasive load and establishing the number of revolutions required to cause visible damage to the glazed surface. The test results are classified into one of six wear resistance groups ranging from class 0 (unsuitable for floors) to class 5 (suitable for intensive pedestrian traffic). The test and the associated scale were originally developed by the Porcelain Enamel Institute (PEI) and hence the term PEI is frequently encountered in this field. Annex N of EN14411 provides informative guidance on suitable end uses for each wear class. To avoid the risk of premature wear, tiles with a wear resistance classification that meets (or exceeds) that required for the particular application should be used.

Class 0 Not recommended for use on floors.

Class 1 Very light traffic. Soft soled footwear or bare feet without direct access from outside (ensuite bathrooms).

Class 2 Light traffic. Soft soled or normal footwear with very occasional exposure to scratching dirt (living rooms, main bathroom areas, bedrooms).

Class 3 Light to Moderate Traffic. Normal footwear in the presence of small amounts of scratching dirt (any residential area with the possible exception of some entries and kitchens if extremely heavy or abrasive traffic is anticipated).

Class 4 Moderate to Heavy Traffic with some scratching dirt (entrances, commercial kitchens, hotels, exhibitions).

Class 5 Heavy traffic over sustained periods with some scratching dirt (shopping centres, airport concourses, hotel foyers).

BS EN ISO 10545-7 and the associated scale are only applicable to glazed tiles. Unglazed floor tiles, e.g. through body porcelain are subjected to a different wear test, namely BS EN10545-6 which measures resistance to deep abrasion.

Tile Fixing Recommendation

The fixing of tiles to walls and floors is governed by several British Standards, notably the BS 5385 series and BS 8000-11. A list of the individual standards is given here:

Fixing standards

BS 5385-1:2009 Wall and floor tiling. Design and installation of ceramic, natural stone and mosaic wall tiling in normal internal conditions. Code of practice

BS 5385-2:2006 Wall and floor tiling. Design and installation of external ceramic and mosaic wall tiling in normal conditions. Code of practice

BS 5385-3:2007 Wall and floor tiling. Design and installation of internal and external ceramic floor tiles and mosaics in normal conditions. Code of practice

BS 5385-4:2009 Wall and floor tiling. Design and installation of ceramic and mosaic tiling in special conditions. Code of practice

BS 5385-5:2009 Wall and floor tiling. Design and installation of terrazzo, natural stone and agglomerated stone tile and slab flooring. Code of practice

BS 8000-11.1:1989 Workmanship on building sites. Code of practice for wall and floor tiling. Ceramic tiles, terrazzo tiles and mosaics

BS 8000-11.2:1990 Workmanship on building sites. Code of practice for wall and floor tiling. Natural stone tiles

A list of standards relating to adhesives and grout is listed here:

BS EN 12004:2007 Adhesives for tiles – Requirements, evaluation of conformity, classification and designation

BS EN 13888:2009 Grout for tiles — Requirements, evaluation of conformity, classification and designation

The nature of the background should always be a primary consideration, since it determines the type of adhesive to be used and whether any intermediate substrate or other preparatory treatment is required before tiling can commence. Factors relating to the background to be considered are numerous and include the type of material, condition, straightness, porosity, presence of soluble salts etc. Early consideration should also be given to the provision of movement joints in order to allow stresses that result from movement of the background, e.g. drying shrinkage, thermal changes and moisture changes to be dissipated.

We also recommend that tiles are separated with minimum tile joints of 2mm for wall tiles and 3mm for floor tiles.

Ceramic tiles can be fixed using cementitious, dispersion or reaction resin adhesives that are suitable for the required application and the type of tile type to be fixed (BIII, BIa etc.). The fixing method to be used varies depending on the type of background, the nature of the adhesive and the anticipated service conditions of the installation. Therefore, the recommendations of the relevant British Standard and the specific instructions of the adhesive manufacturers should be followed. The performance requirements of adhesives are specified in BS EN 12004:2007.

The performance requirements of grouts are specified in BS EN 13888:2009. It should be noted that some coloured grouts can cause staining on certain glazed tiles. Following the recommendations given in BS 5385, we recommend that when using coloured grouts, a loose sample should first be tested to ensure the tile does not absorb pigment into its surface.

Cleaning & Maintenance

With proper care and attention, a correctly installed, good quality ceramic tile should give many years of trouble-free service.

The Tile Association “Cleaning & Maintenance of Ceramic Tiles” publication recommends:

Hard water deposits, soap, scum and body oils build up and, therefore thorough and frequent cleaning is essential.

The best way to prevent build up of soap, scum and body oil deposits is to use a plastic scouring pad with the appropriate cleaner when cleaning. Acidic based proprietary cleaning materials should not be used with ceramics, porcelain or natural stone.

Wet rooms with inadequate ventilation to remove excess moisture may have fungal growth on the tiles or grout. This can be controlled by wiping with a dilute solution of bleach and leaving it for five minutes before cleaning off. If the fungal growth is not completely removed the bleach may be re-applied and scrubbed with a brush to loosen. The surface should always be rinsed thoroughly with clean water. Bleach should always be used with caution and never mixed with other chemicals. Adequate ventilation should be provided when using these materials.

DDA Requirements

When specifying ceramic wall and floor tiles, the main consideration relating to the Disability Discrimination Act 2005 is colour contrast. Having visual contrast between adjacent elements of a building (e.g. doors, walls, stair edging) allows partially sighted people to differentiate between these elements.

Compliance with this Act can be achieved by following the guidance in either the Building Regulations 2004 Part M or BS 8300.

Both of these documents refer to Light Reflectance Values (LRV) to denote colour contrast. LRV is a measure of the total quantity of visible light reflected by a surface. It is measured on a scale of 0 to 100, with 0 being a perfect absorbing black and 100 being a perfect reflecting white.

In practice a typical black matt tile would have a score of around 5, while a pure white gloss tile would typically score around 90. All other tile colours fit in between these two extremes. The larger the difference between the LRVs of adjacent surfaces the greater the visual contrast is and the easier it is for someone with impaired vision to perceive the difference.

In order to ensure buildings meet the DDA requirements, Part M: 2004 requires an LRV difference between adjacent surfaces of at least 30 points. The latest BS 8300 guidance (incorporating Amendment 1 June 2005) states

General technical wall tile

Dry Pressed Tiles, Group BIII, E>10%

Dimensional properties

	TEST NORM	NORM STANDARD VALUE	BRITISH CERAMIC TILE VALUE

that there is research-based evidence that a difference of about 20 points may be an acceptable minimum for large areas. For wall and floors tiles, we recommend an LRV difference of 20 points (minimum) and where possible at least 30 points.

Shading

Tiles from British Ceramic Tile are manufactured to the highest British and European standards. During the manufacturing of ALL ceramic tiles, some variations in shade and pattern can occur, however we are confident that the tone will be consistent. We recommend that sufficient tiles are purchased at one time to complete the jobs. Do not fix tiles if you cannot obtain an acceptable blend for any reason.

Modular Metric

Our tiles are modular metric. This means that the tile Size (mm)s have been designed to accommodate the grout gap in the module Size (mm). This makes it easy to calculate the area that will be covered by the tiles after they have been fixed. Following the recommendations given in BS 5385, our wall and floor tiles have been designed for 2mm and 3mm grout joints respectively. As an example, our equivalent of a 20 x 25cm wall tile actually measures 198 x 248 mm and one box of twenty tiles will produce 1 m² of tiled wall when fixed using 2mm spacers.

General

The product images shown in this catalogue are as accurate as the limitations of the printing process will allow. Please refer to actual product samples before purchasing.

Every effort has been made to ensure the accuracy of the information given in this literature. In the interests of progress, however, British Ceramic Tile reserves the right to change specifications and availability without prior notice.
